# Who we are (FC company)

## Our Company - Founding Partners Profile

We are four partners launching Trip Secure a specialized provider of comprehensive Journey Management solutions from A to Z.
Our expertise is built on more than seven years of delivering safe, compliant, and efficient journey management operations at a global scale.

## Our Experience

7+ years of experience in Journey Management and Operations
•Successfully managed journey operations for one of the major multinational companies in the Oil & Gas sector
•Hands-on experience overseeing journey management across 30 countries worldwide
•Strong background dealing with diverse regulations, country-specific rules, and advanced tracking systems
•Proven capability in designing, implementing, and optimizing full journey management frameworks
•Experience working in high-risk and heavily regulated environments ensuring maximum safety compliance
• We can create and follow up on SOP's
- Following up on the daily operations and implementation of the company driving procedures and policies.

## Our Company - Founding Partners Profile

- Our Certifications:
- Lean Six Sigma – Yellow Belt
- OSHA – Fleet Safety Management
- HSE Levels 1, 2
- Defensive Driving Course
- NEBOSH IGC – Ongoing

**Key Strengths:**

•Strong operational leadership built through managing global-scale projects
•In-depth knowledge of Journey Management standards, procedures, and risk prevention
•Ability to implement and maintain safe and compliant journey tracking systems High adaptability to various international safety frameworks and operational environments
•Exceptional coordination, reporting, and operational control skills across multiple regions

# Journey Management Center : Roles and Responsibilities

**Real time monitoring and tracking**

**Ensuring Driving Policies are Implemented**

**Driving Behavior is Continuously Improved**

## Command Center / Real Time Tracking Services

- Real Time Tracking
- Critical alerts
- Driver late to check-in
- Emergency Response Action

## Data Management Services

- Management of IDs
- Fleet Data Management
- Driver Certifications and license Records

## Technology / Solutions

- Journey Management System
- Driver Point System
- Other Data Analysis & Reporting / Vehicles utilization

**Customer Experience + Digital Capabilities**

# Journey Management Center : Roles and Responsibilities

**JMC/ Real Time Tracking Services**

Our JMC monitors journeys in real-time and ensures compliance to safe driving standards. Using real-time feeds from their vehicle monitoring system as well as through telephonic calls with drivers, we ensure that drivers are following safe driving practices

**Trip Planning / Booking**

**DEPART**

**Ongoing**

**SUSPENSION, ARRIVAL, TERMINATION**

**CRITICAL EVENT**

**OBSERVATION & INTERVENTION**

# Journey Planning During Seasons

**Implementing driving plans and restrictions during exceptionall seasons (Ramadan / Winter)**

## Winter Campaign

During Rainy days / storms we used to raise the driver's awareness through notifications, advising to test their brakes before starting the journey and after passing through any standing water, reduce the speed and increase distance from the vehicles in front.

## Ramadan Plan

Automotive Accident rates are known to increase significantly during Ramadan as many poor behaviors appear among drivers. As the human body may suffer from a temporary decrease in blood sugar levels and dehydration during fasting, sometimes resulting in people feeling unwell or dizzy, in addition to lower concentration levels. The Holy Month of Ramadan is usually a challenging time to remain safe on the road. Hence, we are providing a driving safety plan that could help guiding drivers into taking precautions on the road.

## High Driving Risk Areas

At areas with High Driving/Security risk classification, we are seeking additional approvals from focal points to ensure that all transportation activities are properly assessed, authorized, and conducted in compliance with the established safety and security protocols.

# Trip Booking

- Load Type
- Passenger Capacity
- Registration

07 Driving Conditions Risk Assessment
- Weather
- Road
- Communication
- Security

08 Fatigue Risk Validation

09 Local Risk Validation

10 Pre-Trip Meeting

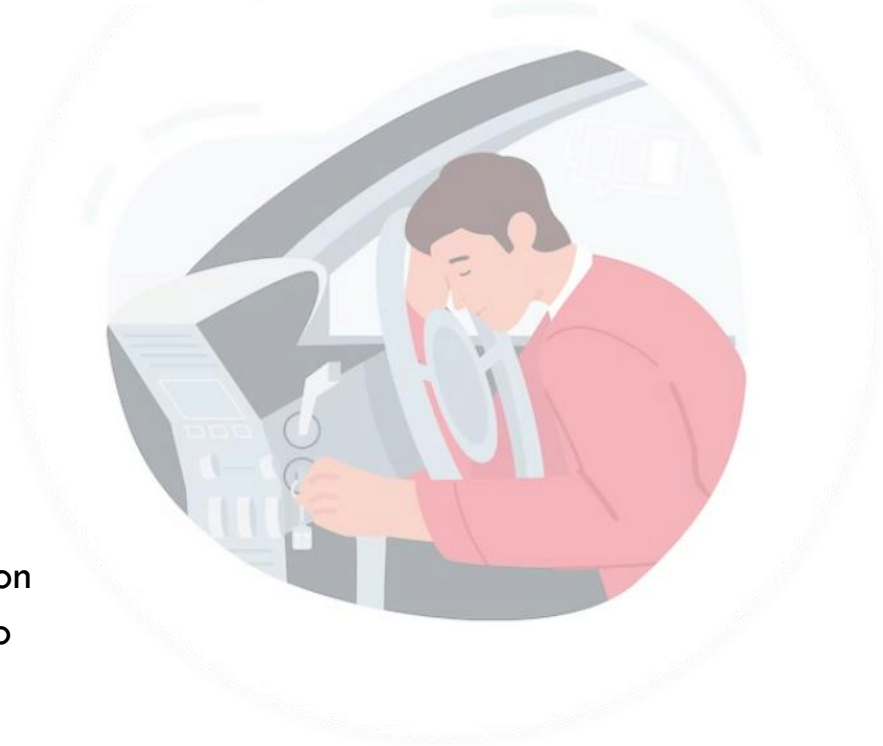
# Validation of Driver Fatigue

**At the beginning of the trip**

- JMC Operator discusses the sleeping hours with the driver and uses the available data and conversation with the driver to assess their fatigue and validate their sleeping hours. Any detection of fatigue leads to the trip not departed.

**During the trip**

- At each stop, JMC Operator must also attempt to verify that the driver has stopped in a safe place and that the vehicle does not pose as a hazard to the driver or others on the road. There are specific questions that can be asked to determine this.



# Intervention During Enroute Trips

**Critical alerts:**
While the driver is enroute, any safety event that gets triggered sends a notification to our centers where our operators intervene

01 **Harsh Braking**

02 **Over-Speeding**

03 **Panic Alarms**

04 **No-Go Zones**

05 **Accident**

# Intervention During Enroute Trips

**Emergency Response Plan:**
If at any moment our JMC is notified of an event or an accident, an ERP is initiated where all interested parties are notified

**Accident Analysis:**
Apart from initiating the ERP, our JMC also provide an analysis report on all Light, Serious, Major and Catastrophic automotive accidents

# SUSPENSION / ARRIVAL / TERMINATIONS : Process & Triggers

# Road Hazard Assessments

# Road Hazard Assessment

- RHA is critical in journey management as it helps identify and mitigate risks before travel begins, reducing the likelihood of accidents, delays, and emergency situations. It directly supports safer routes, better planning, and faster response in case of incidents.

- Covering all roads that vehicles will frequently use in journey management is a vital part of road hazard assessment.

# Vehicle inspection

# On-Site Technical Inspection for Transport Vehicles

Scope of Work: Our team will conduct a full technical inspection for each vehicle, including:

- Engine and mechanical systems inspection.
- Electrical systems inspection
- Suspension and chassis inspection
- Safety and operational condition assessment
- Identification of required maintenance items
- Preparation of a technical condition report for each vehicle

Team Composition:

- Mechanical Engineer
- Mechanical Technician
- Electrical Technician
- Suspension Technician
- Maintenance Supervisor

Notes:

- The inspection will be conducted at the client’s site.
- The service includes mobilization of the technical team and required inspection tools.

# Q&A

Thank you
